

SHORT CV

Rúben Manuel Ferreira has a master's degree in architecture from Universidade Autónoma de Lisboa, Luís de Camões (UAL). He has worked with several private offices and in the public sector, giving insight into developing architectural ideas for project implementation at different scales of approach and methodologies within a research-based foundation strategy. In the public sector, working with Geographic Information (GIS) projects, EU project development for European funds reception, and Urban development from a planning perspective, with regular consultancy practice to actors (architects, engineers, designers), about the legal and architectural framework. He has been developing his own practice atelier in Norway and is a doctorate student in his third year, at the Lisbon School of Architecture, in Lisbon, with the expertise of Project Theory, and Practice. He researches space architectural value, heritage hints, and disposition related to the conceptual and formal importance of atmospheres in architecture.
